Santa wants to analyze which toys that were produced in his workshop have already been delivered to children....

Question 1: Santa wants to analyze which toys that were produced in his workshop have already been delivered to children. You are given two tables on toy production and toy delivery — can you return the toy ID and toy name of the toys that have been delivered?

```
SELECT p.toy_id, p.toy_name FROM toy_production AS p INNER JOIN toy_delivery AS d ON p.toy_id = d.toy_id ORDER BY p.toy_id;
```
