The Productivity Club is tracking members' challenge start dates and wants to calculate each member's `focus_end_date`, exactly 14 days after their start date....

Question 1: The Productivity Club is tracking members' challenge start dates and wants to calculate each member's `focus_end_date`, exactly 14 days after their start date. Can you write a query to return the existing table with the `focus_end_date` column?

```
SELECT
    member_id,
    member_name,
    start_date,
    DATE(start_date, '+14 days') AS focus_end_date
FROM
    focus_challenges;
```
